

LASH & BROW CO.

BROW TATTOO PRE CARE & AFTER CARE FORM

** IMPORTANT NUMBING CREAM INFORMATION **

At Lash & Brow Co. we highly recommend to use numbing cream. We ask that you contact a compounding chemist to create you a numbing formula that is suitable for your skin as this is the strongest and most effect form of numbing. The pharmacist will prescribe a pre-numb cream and numbing cream to use during the treatment.

Legally we cannot provide the numbing cream in the treatment room, however, if you bring it to the appointment you will be able to use the numbing cream throughout the treatment.

We recommend using Berwick Springs Pharmacy - Compounding Chemist at
137 Moondarra Dr Berwick
Phone: (03) 9702 2200

BROW TATTOO PRECARE

- Leading up to your appointment do **NOT** tint your eyebrows or wax/pluck/tweeze etc.
- The tint will not only give us a false impression of your true eyebrow colour but it may also interfere with the pigment.
- Discontinue active skincare 2-4 weeks before treatment (e.g. Vitamin A, chemical peels, prescribed skincare etc.)
- Do not have Botox 4 weeks prior to the procedure as this may result in uneven brows once the Botox settles.
- Prior to treatment please inform us of any medical conditions or allergies.
- Do not take aspirin, fish oil, niacin, vitamin E or Ibuprofen 24hours prior to procedure as this thins the blood (do not cease regular medications unless talking to your GP).
- Do not do any excessive exercise the day of procedure.
- Do not tan 2 weeks prior to your procedure. This includes not having fake tan on your face.
- On the day of your appointment make sure you have eaten sensibly and are well hydrated.
- Do not consume alcohol 24 hours prior to your procedure.
- Please bring a picture of how your brows would look penciled/powdered in to your appointment
- Please arrive 10 minutes early to your appointment to complete the appropriate paperwork.
- Please apply the pre numbing cream 1-2 hours before your appointment and make sure to bring the during cream to your appointment!

THINGS TO KNOW

1. The durability of microblading depends on the individual's skin texture and condition and on the skin's metabolism. It is therefore not possible to guarantee durability or that the colours won't fade. Durability depends on a number of factors: skin texture and condition, correct follow-up care by the customer, as well as choice of colour/intensity. Unwanted colour changes cannot be ruled out.
2. After the treatment, the pigmented area will appear more intense and the customer may experience swelling, redness, crusting and sensation of tightness. Please follow the care instructions for approx. 2 weeks after the treatment.
3. The result of the treatment only becomes visible once the healing process is complete; this takes approx. 2 to 4 weeks. Since we all heal differently and have different metabolisms, one or more follow-up treatments may be necessary. In some isolated cases, the desired outcome may not be achieved because sometimes the skin does not absorb the colour pigments regularly or even at all. In some rare cases, the colour may run. It is therefore not possible to guarantee a successful treatment.
4. Please protect the pigmented areas from intense UV radiation (eg: sessions at the solarium), and use our after-care cream. In the first 2 weeks, you should also avoid high levels of air moisture (eg: a sauna visit)
5. If you have had permanent make-up treatment before and we correct or re-touch it, please be aware that it is possible for the deeper and older colour to reappear after a while, or for its colour to dominate because of its chemical composition. We can therefore not guarantee the success of the treatment.
6. In rare cases, the area treated with microblading can warm up during an MRI scan. We recommend to advise your medical team that you have had such procedures done prior to commencing the scan.
7. In rare cases, allergic or allergy-like reactions can occur (granuloma, permanent skin changes, dryness, pigment disorders, sensitivity, swelling, flaking) as skin irritations as a reaction to the colour pigments. We can therefore not guarantee the tolerability of the colour pigments.
8. Microblading can only be removed by medical specialists using the latest laser technology. White colour pigments cannot be removed, and complete removal cannot be guaranteed.
9. Microblading at Lash & Brow Co. can only be performed on clients over the age of 18.

BROW TATTOO AFTERCARE

DO NOT:

- Pick or itch your brows.
- Wax, tint or tweeze your brows for up to 4 weeks.
- Submerge your brows in water for two weeks. This means NO swimming/saunas for 2 weeks.
- Participate in any strenuous physical activity for 2 weeks.
- Wear makeup, tanning products or skincare on the brow area for two weeks after treatment.
- Touch your brows due to risk of contamination.
- Use any active products on or around the brow area.
- Have any cosmetic surgery/injectables, laser treatment or chemical peels/facials for at least 4 weeks.

Its important that you follow the guidelines above and below to decrease the chances of pigment loss and cause scarring or delayed healing.

DO:

- Avoid sun exposure and apply sunscreen once brows are fully healed.
- Avoid facials, laser treatment, chemical peels and active products near the area to avoid pigment loss.
- Complete the process and book your " Perfecting Touch Up' within 6-8 weeks after initial treatment.
- Book your ' Annual Touch Up' appointment 12-24 months after 'Perfecting Touch Up' treatment.

TODAY: 3 hours after treatment use enclosed sterile wipes and wipe each brow (one wipe for each brow)

DAY 2-3: During this time you may experience some some itching. If itching occurs, then apply a small amount of the aftercare cream enclosed using a cotton tip.

DO NOT DOUBLE DIP! Do this only if you feel itching
